### County Launches New Permitting Software

**DINWIDDIE, VA** - Dinwiddie County has launched a new software system within the Building and Planning Departments for permitting, inspections, planning, zoning, and code compliance. EnerGov is designed to streamline applications, reviews, and inspection processes through a user-friendly, online platform.

EnerGov allows for convenient electronic processing of commercial and residential development matters such as permits, planning cases, zoning cases and code compliance cases. Users can submit applications and pay for permits, track the progress, receive notifications, review documents electronically, request inspections and view inspection results, all through the portal.

The County's Building Official, Jerry Perkinson, stated "Dinwiddie County Building Inspections is pleased to offer our new EnerGov software system. This system will allow customers the ability to streamline all permit and inspection requests online and will enhance our value-added customer service."

Planning Director Mark Bassett stated, "The EnerGov system is going to make the permitting process much more convenient for citizens. The online system provides a conduit for faster, more efficient communication between applicants, contractors, and our Building, and Planning & Zoning departments."

Customers can access the online system via the County website ([www.dinwiddieva.us](http://www.dinwiddieva.us)) using the "Online Permitting" link on the Building Inspections and Planning webpages. County staff will be available to assist with registration and system navigation. Paper permits will continue to be accepted.
